Evaluation of Cooperation

In this document, you report roughly who did what when and submit it in the last week to Canvas along with your project. Also, indicate at the bottom if you find that all members deserve the same grade or some should be rewarded for doing a bigger percentage of the work.

Please fill in the tables below (a rough indication) on how many hours every group member spended on the project the corresponding week. Working less is penalized when the allocated tasks that were agreed on are not met, otherwise it is a sign of efficiency. Describe in a few keywords what the tasks were you worked on.

Group member	Hours worked	Tasks (keywords)
Tygo Nicolai	50	- Mainpage of the dashboard
Vladimir Petkov	55	- 1_Artists Page (fully) - 2_Albums and Tracks Page (fully) - … - …
Vlad Mare	40	- Lineup optimization – cost determination, stage class - Readme.md upkeep - Album Guessing Game (not part of dashboard) -
Márk Németh	65	- Lineup Optimization page (optimization, broad genres, analytics, dashboard, appeal model) - … - … - …

Finally, a small evaluation.

- *Should everyone in the group get the same grade or, in other words, did everyone do an equally large percentage of the work?* Yes
- *Please, underpin your answer with one or a few sentences.*

… We were able to distribute the work evenly and everyone did their tasks in time.

Usage of GenAI

In this part of the evaluation, assess how and when you used genAI to complete certain tasks. Keep a log during the project using the following template. Feel free to add rows to the table when needed.

Date of use	**Tool used**	**Tasks**	**Prompts (copy/paste or summarize)**	**How was the output used?** Directly / modified / for inspiration / not used	**Verification** How did you check correctness?
Start to finish	Chat GPT		Help me to identify the error	It explained the exact errors and suggested ways to solve them	It was used all over the assignment
15/02/2026	Chat GPT	- ... - ... - ... - ...	Why is the correlation between followers, number of genres, and popularity so low? Should I modify the data, and if so, why?	It suggested me the following: "Correlation on the raw scale gets distorted. Fix: use log scale Try correlating popularity with log_followers." I used this idea	The correlation matrix seemed more reasonable.
23/02/2026	Chat GPT	- ... - ... - ... - ...	Here is a list of unique words from music genres(I created a list beforehand that contained all the unique words from the genre columns), I would like you to create keywords based on these unique words that could help me in putting artists into broad genres.	It helped me in listing keywords to specific broad genres.	I manually checked several artists and confirmed that the assigned broad genres matched their actual genres.
01/03/2026	Chat GPT	- ... - ... - ... - ...	What is a good Python library for solving integer linear programming problems?	It suggested using PuLP and I used it.	The model successfully ran and returned feasible solutions.
01/03/2026	Chat GPT	- ... - ... - ... - ...	What are the main functions of the PuLP library and how do they work?	It explained how to use the decision variables, objective functions, and constraints. Also giving me exact codes showing how	I verified correctness by checking if the constraints were satisfied.

				to implement them in my function.	
02/03/2026	Copilot		Why is it suggested to use .copy in python	“Copying in Python is crucial for preserving data integrity and preventing unintended changes”Chat -> In places where it made sense I added .copy in the Festival lineup codes	
09/03/2026	Chat GPT		How can I convert numbers to currency?	It suggested to create a function: fmt_money. Also it suggested for me to create fmt_num making my coding easier.	
15/03/2026	Chat GPT		I have a df where one column contains lists of genres for each artist. Currently, I am looping through the rows using iterrows() and then looping through each genre in the list to count and group them. This approach is quite slow when the dataset gets larger. Is there a more efficient way to handle this?	I used the suggested lines: exploded = lineup_df[["broad_genres"]].explode("broad_genres") exploded = exploded.dropna(subset=["broad_genres"])	
18/03/2026	Chat GPT		Why doesn’t my build_solution_comparison function work (i had the code without the “**”)	I need to use **best_metrics and ** worst_metric to unpack the dictionarries	The comparison table was visible after
20/03/2026	Chat GPT		Here are relevance photos I would like you to edit my Festival dashboard to match the style in the pictures. Do not change any logic	I made the AI change the code till I’ve got what I imagined for the best user experience	At the end I went through each line and checked what their effect is on the dashboard and edited if I felt necessary.

			regarding the model itself.		
	Chat GPT		Please fetch the most important methods for working with Pandas/sqlite3/streamlit	To get an understanding of the capabilities of a library and its methods	Dove deeper into the actual documentation where needed
16/02/1026	ChatGPT	-filtered_df_genre (part_1.py) - similarity_check - …	Asked for help with figuring out a way to check part of strings in a whole string; for revision of visualisation via mathplotlib; for recommendations to check similar names upon and for help with the formulation of the names to chek.	I was adviced on using .str.contains, and SequenceMatcher for name similarities and given basic usage of the method, which I used as a starting point.	I tried out my code and inspected myself.
20/02/2026	ChatGPT	- part_3.py - … - … - …	I asked about revising and improving SQLite database structure and queries — including adjusting primary and foreign keys, inspecting constraints, refining JOIN logic and related SQL statements, and understanding when to perform data processing in SQL versus Python for better performance.	I used most output as a refreshment for the mobility and functionality of data bases.	I compared with notes from my previous databases courses and by inspecting the code myself.
12/03	ChatGPT		Theming of the application (config.toml)	I used Google search and ChatGPT to understand how one can personalise the layout of the dashboard using theming. I used the outputs for navigation in creating the file and onwards used google results to	Tried it out.

				personalise it to my liking.	
13/03	ChatGPT		ITunes API configuration	I used ChatGPT to understand how API works, I used it also to help me get the queries for online search for the pictures (url).	Tried out the queries with personalised input and inspected the downloaded text files so I understnad better what is inside each.
17/03	ChatGPT		SQL syntax	I have studied before databases, however needed some extra functionalities and flexibility, so occassionally I used ChatGPT for inspiration for functions in SQL (as for example ollate nocase, year and substring(), "with sorted_artist_popularity as") together with fixing bugs where queries did not run correctly.	Tried it out.
22/03	Chat GPT		Bug fixing around line 335 in album and tracks	I had a bug regarding the dataframe index and track name, so after trying out on my own, I copy/pasted a code snippet around that line in Chat GPT to ask for help. It gave me an idea of how to make it better, so I used it.	Tried it out and inspected.
17/3	ChatGPT	Collapse pill options once toggle is disabled	This is the current state(picture) . Can i make the options collapse once the toggle is disabled,	If function used in sidebar code.	Result worked
19/3	Claude	Assistance with making the genre filter for the mainpage	I want a function which filters the mainpage based on the selected genres	Output was used to complete the function	Checked the logic of the function

20/3	Claude	Help understand how a ranked list with a slider can be made	Show with an example how to code a scrollable top 100 list for a streamlit dashboard	Code for slider was inspired(partially adopted)	The slider worked
20/3	ChatGPT	Change the background of the heatmap graph so it is consistent with the rest of the mainpage	can you make the background #1A2F32 this color?	Directly	Graph is consistent with the rest of the dashboard
20/3	Claude	Create the where statement for the heatmap function	"{ code } ", I want this function to return the album releases per day in 2023	Where statement used in query function, counting mechanism used	No weird results, functions perfectly.
22/3	Claude	Ensure consistency across the mainpage	"Change the size of the graphs so it is consistent across the entire page"	directly	Looks consistent

Final reflection:

- Did GenAI support or limit your learning?
-
- What tasks were hatter handled by you rather than GenAI?
- What would you do differently next time when using GenAI?
